

RE-COOL 54 ANTIFREEZE / COOLANT

Re-Cool 54 is our premium, re-manufactured, extended life 50/50 coolant designed for all light duty automotive use. Utilizing a Hybrid Organic Acid Technology (HOAT) inhibitor package, Re-Cool 54 is a universal coolant that will fit your needs.

Previously, downhole disposal was the only acceptable method for disposing of used antifreeze. However, the molecular integrity of waste antifreeze remains intact and the fluid can have an infinite life if it is properly maintained. **Re-Glycol 2014 Ltd.** has refined a process utilizing closed-loop distillation technology that can restore over 95% of waste fluid to a like-new state.

All of our re-manufactured fluid is tested to ensure it meets the requirements of ASTM D7713. Made with a 54% ethylene glycol based fluid, Re-Cool 54 delivers a higher boiling point and better protection from freezing to at least -43°C

... a truly Canadian antifreeze made for Canadian conditions.

All Re-Cool 54 is independently tested to ensure it exceeds the standards set out by ASTM D3306.

Re-Cool 54 provides year-round protection against freeze-ups, boil-overs and engine cooling system corrosion, and disperses minor oil leakage, controls hot surface scaling and prevents fouling.
