

## RE-COOL 59 ARCTIC ANTIFREEZE / COOLANT

Re-Cool 59 Arctic is our premium, re-manufactured, extended life 50/50 coolant designed specifically for the rugged winter conditions in Canada's northern regions. Utilizing a Hybrid Organic Acid Technology (HOAT) inhibitor package, Re-Cool 59 Arctic will provide long, reliable system life.

Previously, downhole disposal was the only acceptable method for disposing of used antifreeze. However, the molecular integrity of waste antifreeze remains intact and the fluid can have an infinite life if it is properly maintained. **Re-Glycol 2014 Ltd.** has refined a process utilizing closed-loop distillation technology that can restore over 95% of waste fluid to a like-new state.

All of our re-manufactured fluid is tested to ensure it meets the requirements of ASTM D7713. Made with an industry best 61% ethylene glycol based fluid, Re-Cool 59 Arctic delivers a higher boiling point and better protection from freezing to at least -51° C

... a truly Canadian antifreeze made for the harshest Canadian conditions.

All Re-Cool 59 Arctic is independently tested to ensure it exceeds the standards set out by ASTM D4985, D6210/11, and the Maintenance Council of the American Trucking Association's RP329.388.

Re-Cool 59 Arctic provides year-round protection against freeze-ups, boil-overs and engine cooling system corrosion, and disperses minor oil leakage, controls hot surface scaling.
